Lunar Legend Silver 2015 Q1, 1st Production Line
Where: Lunarlab Co., Ltd. Players: 1-8 Developed
by: Marukimasu, Our Home Game Studio Published
by: Marukimasu Co., Ltd. A true action RPG in
which monsters are the main focal point, where you
will encounter a variety of monsters from a wide
variety of species. With realistic battling and three
axes of action, combat will be a never-ending game.
The story of Silver is the tale of a young man named
Ricardo. His young life was brutal and joyless, and
his body became scarred as a result. As a result of
his experiences, Ricardo became a mercenary who
travels between the human world, the world of the
monsters, and the world between. Ricardo meets and

becomes involved with a human girl named Maria, a young maid who looks after him. After Ricardo discovers that Maria and her family are being threatened by the creatures from the underworld, he embarks on a journey to save them, and he eventually learns the history of the girl, who has become a vengeful goddess. [System] • Action Controls: Using the analog stick to move the character and the left analog stick to control the camera are necessary. The right analog stick is used for changing weapon types, equipment set, and magic, and using the D-pad to select various commands is optional. There are multiple attack modes, as well as special command attacks. You can also use the D-pad to move your character in addition to using the analog sticks. • Camera Controls: You can use the L and R shoulder buttons to change the camera's angle and zoom. • Magic: You can use magic as a skill in battle. You can also raise your power by combining magic with certain weapons. You can choose a combination of up to 3 magic spells in battle. • Characters: Each character possesses specific skills and weaknesses, depending

on their class, and you can raise their power by equipping unique weapons. • **Difficulty:** The battle system and game world are designed so that there is a balanced difference between challenging and easy battles. Additionally, you can easily adjust the difficulty settings to suit your preferences. • **Resolution:** The screen resolution can be set to 1024×768 or 1280×768. The camera's maximum angle is 70 degrees and the zoom level is

WASHINGTON (AP) — House Speaker John Boehner says he has no plans to step down from his position as leader of the nation's largest Republican-controlled body. Boehner made the comment Wednesday after a closed-door House GOP conference meeting. He suggested that lawmakers are simply looking for options to repeal the law. "It's not getting done. So what we're trying to do is help those members who are looking to see options," Boehner told reporters. "We're not going to leave; we're not leaving; we're going to stay right here and continue to fight." GOP members could introduce as many as three alternative efforts to repeal the law, two GOP aides told The Associated

Press. Some lawmakers have suggested that they could seek an "Amnesty First" strategy that would delay or derail Obama's push for a mandatory online government-run insurance exchange, which was left intact in the House version of the bill.

Q: Finding a specific product from a list This is my first question on Code review: I am attempting to solve Project Euler #75 and what I am currently trying to do is take an input integer (a random number between 30 and 69) and from a list of product factors, find the one that is closest to the input. What I have so far:

```
public class Euler75 {
public static void main(String[] args) { // Create a
random integer from 1 to 69
System.out.println(generateRandomNumber()); //
List of product factors List factors = new
ArrayList(); List list = new ArrayList(); list.add(3);
list.add(5); list.add(7); list.add(35); list.add(37);
list.add(55); list.add(61); list.add(67); list.add(2 * 5
* 7); list.add(3 * 5 * 37); list.add(3 * 5 * 7 * 13); //
Get the random integer back int input =
Math.floor(Math.random() * 69) + 30;
System.out.println("The random input is: " + input);
// Find the product closest to the input int
closestProduct = 100; for (Integer testProduct : list)
{ if (Math.abs(input - testProduct)
```
